

QOMO HiteVision to Exhibit in Amsterdam at ISE 2009

Wixom, MI, October 21, 2008—Metro Detroit—United States. QOMO HiteVision will be exhibiting in Amsterdam at Integrated Systems Europe- ISE 2009 from February 3-5, 2009.

We are a company that will take your presentation abilities to the highest stature. QOMO is committed to innovation, leadership, and customer satisfaction. We offer products that are manufactured with quality and diversity. Our product line consists of interactive tablets & whiteboards, document cameras, audience response systems, and digital signage.

QOMO HiteVision has won various awards. Their most recent one is the Reader's Choice Top 100 Products of 2007-2008 for the Prodigy RF Wireless Tablet via its breakthrough in interactive technology: enabling a presenter to connect up to 30 tablets at ONE time with no interference! In addition to using the 2.4GHz RF technology, it also allows a presenter to walk freely around the room and become engaged with his or her audience. It has a unique integrated rechargeable battery that easily recharges through the computer via USB cable and has over 20 hours of continuous cable-free operation. The wireless tablet also has intuitive express keys to control page up/down, simple volume adjustment with the use of the pen, and 16 programmable macro keys all allowing the presenter to quickly perform functions, such as opening a new program, saving a file, etc. to help him or her smoothly transition through the presentation.

QOMO's digital document cameras offer a variety of practical usage to help a presenter enhance his or her presentation. QOMO HiteVision creates the cameras to fit YOUR presentation needs. They offer a variety of document cameras with different options. The document cameras all offer a built-in video scalar, multiple input and output terminals, and remote controls that are very simple and user-friendly. They have excellent digital and optical zoom, 3-D, split-screen, title function, image freeze, and most importantly, their LED lighting is long lasting, has low power consumption, and is ENVIRONMENTALLY FRIENDLY!! The document cameras have a new sleek, thin, lightweight design that makes them convenient to carry; an optional carrying case is offered which is ideal for business travelers or for simple storage.

QOMO HiteVision's whiteboard is a powerful presenting tool, built to last, works with all computer programs, and comes in a variety of sizes. The surface of the whiteboard is an excellent projection surface with minimal glare, strong durability, and is easy to clean. Users love it because it was designed so simply—it has hot keys on the board allowing for quick access to a variety of functions. To write, the whiteboard has pens, a wand, and even allows the presenter to use his or her own fingers. QOMO HiteVision includes their software program Flow!Works for annotation and manipulation of any electronic file type or program and saves your work. The presenter can also create and edit over live motion video and the whiteboard supports real time, on-screen editing. It is a great program to use with the interactive products which create the "QOMO Interactive Presentation Solution"—a powerful simple technology enabled environment.

The QClick is QOMO's audience response system- the most powerful and cost effective interactive wireless system on the market. Its uses range from traditional classroom settings to group meetings where instant feedback is critical. QClick integrates completely into Microsoft® PowerPoint, making it both easy to learn and fun to use. Once again, QOMO's product helps enrich the user's presentation and keeps the audience captivated. Each audience member can have a remote keypad- to answer questions, vote, and conduct roll call, etc. The presenter, with his or her own custom remote, can control the course of activities and receive real time feedback. All of this at the simple CLICK of a button.

QoVision is QOMO's exciting and easy to use Digital Signage software system. QoVision offers flexibility for the experienced programmer and intuitive design for the novice. The software can integrate video, graphics, animation, RSS feeds, and many more audio-visual elements. It can be managed through the network for display in remote high performance display devices.
