

like writing on paper only better.

teacher's assistant

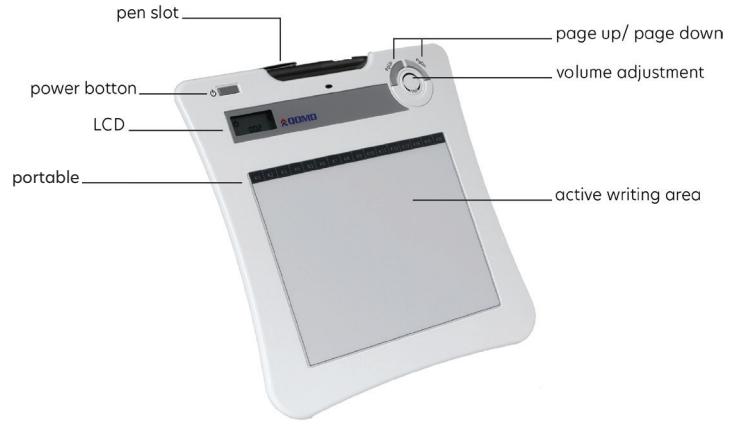

The QIT30 puts **the power of an interactive whiteboard** in your hands, giving you the ability to roam and interact with your audience.

long-range wireless technology

Rather than bluetooth, a technology designed for cell phone headsets, the QIT30 Wireless Tablet uses 2.4Ghz RF technology used by long range wireless networking products.

The QIT30 gives presenters the ability to provide personalized attention to audience members by moving around the room and letting them contribute to the presentation. You'll never need to face your back to your audience again.
